Automobile Insurance Management System – Hexaware Technologies

Trainer's Name:

Mr.Javeed

Presented By:

Suwasthika Sri K V

Introduction

- Insurance companies need efficient digital systems
- Manual processes are time-consuming and error-prone
- Automation improves:
  - Accuracy
  - Speed
  - Customer experience
- This system provides a complete solution for vehicle insurance management

Scope

- Display available insurance policies
- User registration and login
- Proposal submission for vehicle insurance
- Proposal review and approval by officers
- Quote generation and premium calculation
- Online payment and policy activation
- Policy status tracking (proposal, active, expired)
- Email notifications and reminders

Definition

- Automobile Insurance Management System is a **full-stack web application**
- Designed to manage:
  - Vehicle insurance policies
  - Customer information
  - Claims and payments
- Enables interaction between:
  - Users (customers)
  - Officers (insurance staff)
- Ensures secure, fast, and automated insurance processing

Modules

- Patient Module User Module – Registration, login, proposal submission
- Officer Module – Proposal review and approval
- Policy Management Module – Create and manage policies
- Claim Management Module – Handle insurance claims
- Payment Module – Premium payment processing
- Security Module – Authentication and authorization

Technologies Used

- Frontend: React
- Backend: Spring Boot
- Database: MySQL
- Authentication: JWT
- Tools: Postman, Swagger, GitHub

User Features

- Register and login
- Apply for insurance policy
- Upload documents
- Track policy status
- Make premium payment
- Download policy document

Officer Features

- Secure login
- Review proposals
- Request additional documents
- Approve or reject policies
- Generate quotes
- Update policy status
